

Our Sustainability Principles

■ GEBERIT®

Geberit's leading position in its markets stems from the company's efforts to produce sustainable products ever more efficiently. The energy and water consumption used to produce products, such as our concealed tank and carrier, is continually decreasing. Our new products set new standards in water conservation and water quality.

Geberit has been ranked among the top 10 most sustainable companies in the world (out of an initial list of 3,000 global, public companies). The ranking, produced by Corporate Knights, a Toronto-based company, strives to make the idea of sustainability clear and measurable through the collection and analysis of data on companies. The environmental, social and governance metrics used to rank the companies, which included energy productivity, waste productivity and CEO-to-average-worker pay ratio, also used "transparency" as a metric. Geberit, being in the top 10, is a reflection of the deep commitment the company has toward the idea of sustainability.

Our commitment to the principles of sustainability parallels those of the U.S. Green Building Council, the EPA and the Alliance for Water Efficiency. Our association with these organizations extends our reach in communicating its importance.

"Whether there is an economic crisis or not, people have to think about sustainability today and act accordingly" said Albert M. Baehny, Geberit Chief Executive Officer.
